Product Release Notes

MyBloodHealth® Release 3.0 January 3, 2022

Product Detail and Version

Product Name	Version	Date	Comment
MyBloodHealth	3.0	January 3, 2022	

Revision History

Date	Version	Description	Author
	1	Release Notes	Melissa Hollo

Feature Release list contained in Version 3.0

New + Improved

- 1. Enhanced Login
- 2. Patient Dashboard View Enhancement
- 3. Lab Type/Case Type Mappings
- 4. Lab Interpretation: Smart Section
- 5. Pre-Assessment and Surgical Assessment: Smart Section Utilization

Fixes

None currently

Detailed Product Release Description

1. Enhanced Login

The login page has been enhanced to reduce the number of log ins throughout a session. With the new feature, the user will still be required to log in using a Multi Factor Authentication, but once logged in will maintain login.

£	

Figure 1- Log in Screen

Once the user has logged in and completed the MFA, duration of login time will be XX before the user is log out (*reducing the repetitive need to log in during each use*).

2. Patient Dashboard View Enhancement

MBH 2.0 required the user to select different tabs to review the patient case. In MBH 3.0, the overall patient case will be seen on one screen.

As seen below, in MBH 2.0 the patient case data is broken out by areas: Actions, Patient Details, Lab Results, Visit Documents, Patient Communication, Internal Communication, and chain of Custody. To update any section, the user was required to click through each section.

Figure 3-Patient Case Review on MBH 3.0

The user will click on the worklist tab on the left-hand side toolbar. They will then select the patient they would like to review. When they click on their name, the case review will appear. On the main page, the user will see the patient demographic, what pertinent information was received, physician/surgeon information, treatment facilities, documents, labs, etc. Also, on this page they will be able to select if the patient requires invasive treatment or is a bloodless case.

On the right-hand side of page, there are two tabs which will show patient details and chain of custody information.

3. Lab Type Mappings/Case Type Mappings

Lab Types

As labs are ingested into the MyBloodHealth tool daily, new unmapped labs will emerge. In MBH 2.0 the external admin would need to notify the site of the new test and review it with the site for updates. In MBH 3.0, the client admin will be able to map as new labs present.

To keep the tool up to date, it's important to ensure all labs are mapped to the correct location. The user will click on the "Lab Types" tab and see the list of labs, their current levels, and whether the lab is active.

Search Lab		Active -	✓ APPLY ×CLEAR
Lab Type			Status
Hct	Refer	ence : 40.00 : 53.00	
	Male	Abnormal Below: 39.99 Abnormal Above:53.10	A store
Unit:% Range:10.00-60.00	Refer	mpe : 35.00 : 47.00	Active
	Female	Abnormal Below: 34.99 Abnormal Above:47.10	

Figure 4 – Lab Types (ADMIN FUNCTION)

If a lab is needing to be mapped, the user "Add Lab Type" button and input the appropriate lab parameters for the lab that is being added.

Figure 6 – Uploading the New Mapped Lab

Case Types

Case type mapping allows the administrator to determine where each procedure should be mapped. In MBH 2.0, the user MBH Admin would need to review the case type with the site administrator then update. In MBH 3.0, the site admin can manage the case type mapping function.

ise Type			+ Add Case Type
Search Case type, Type	Active	•	✓ APPLY × CLEAR
Case Type		Туре	Status
ORTHO		SURGICAL	ACTIVE
Cardio		SURGICAL	ACTIVE
SPINE		SURGICAL	ACTIVE
Women's Health		SURGICAL	ACTIVE

Figure7 – Case Type View

The user will click on Case Types on the left-hand side tool bar, then click the "+Add Case Type" to add a case type. Once updated, click on "Save Case Type".

Figure 8 – Creating a new Case Type

Once the appropriate parameters are added and the case is saved. The new mapping will display as shown below.

ise Type Mappin	9		T Opicad Mapping
Search Code, Descript	ion		✓ APPLY × CLEAR
Code	Description	Mapping	
11257	surgery	Cardio	*

Figure 9 – Complete Case Type Mappings

Once complete, the user will click "Upload Mappings" to ensure that future mappings will be accurate.

4. Lab Interpretation

In MBH 2.0 the lab interpretation function is part of the Pre-Surgical Assessment and Recommendation Report. In MBH 3.0, The Lab Interpretation now sits on the patient dashboard. Once completed, it will be ingested directly into the Pre-Surgical Assessment and Recommendation Report.

The user will click the appropriate box based on the labs listed on the right hand side of page.

Figure 10 – Lab Interpretation function in MBH 3.0

5. Pre-Surgical Assessment and Recommendation Report Enhancement

In MBH 2.0 the PSARR has a copy and paste function where the client can choose pre-scripted options to add to the assessment. Whereas, in MBH 3.0, for the Pre-Surgical and Recommendation Report will utilize smart sections. They would determine which smart section to use by clicking a box opposed to utilizing the copy and paste function.
