5. Additional Cancellation Reason
6. Support/Feedback Button added to all screens

#### Notes

1. MyBloodHealth Report Update
  2. Known Issues: Dashboards
-

## Detailed Product Release Description

### 1. Count dosage amounts of Treatments Provided

Previously the user could not enter the number of specific treatment doses, the default dose was one. The new enhancement allows the user to enter a total number of treatment doses ordered. This improves the treatment, medication revenue, and ROI impact reports.

---

### 2. Case Type/Lab Type: Mapping file options

Previously when a lab type or case type needed to be mapped, it displayed a Sync symbol. The new enhancement displays the actual number Case Type/Lab Type needing to be mapped. The enhancement also features the option to “exclude” under mapping options.

---

### 3. Cancellation Report: Potential Missed Revenue Enhancement

An enhancement has been added to the Cancellation Report to display potential missed revenue impacts to the client’s program for patients who identified as anemic, not treated, and cancelled.

---

### 4. Search Procedures by CPT Code

An enhancement has been added to allow the user to search procedures by a CPT code if provided with client data ingestion in addition to the current procedure code search. This will allow the user to search and map both procedure and CPT codes.

### 5. Additional Cancellation Reason

An additional option has been added to the not treated cancelled reason to allow the user to select “Patient has not received pre-admission testing”.

### 6. Support/Feedback Button added to all screens

A Support/Feedback Collector button has been added to the bottom right-hand corner of all screens for the user to easily access. This feature allows users to submit issues, ideas, or questions directly from within the MBH application.

---

## Product Notes

### 1. MyBloodHealth Report Update

The report feature in the MyBloodHealth product has been refactored for optimal functionality. All reports will be included in the release.

### 2. Known Issues: Dashboards

The Client and Admin Dashboard feature in the MyBloodHealth product is still in development and will be delayed for a future release.
